RPKI ROA updates

Anurag Bhatia, Hurricane Electric (AS6939)

Introduction

Working at Global backbone operator & datacenter provider -Hurricane Electric and based in Haryana, India. Spend lot of time in looking at BGP routing tables, traceroutes across the ocean, interesting patterns & tooling around those patterns.

Besides routing I got lot of interest in DNS, root DNS servers, network automation & virtualization.

Also a dad since Sept 2021! ;-)

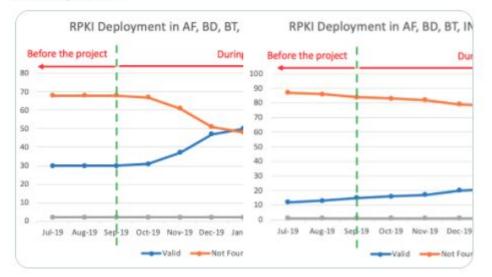

Starts with tweet from my friend Awal

Md Abdul Awal 🚲 @0xAwal - Jul 12, 2020

000

My routing security project with @nsrcworld & @mozilla started in Oct-19 to improve #RPKI deployment in South Asia+Myanmar. The two graphs show tremendous growth in RPKI and how #INDIA is lagging behind. @anurag_bhatia @RoutingMANRS @routinator3000 @Abuselp @routingtablepod

Thoughts after looking at the tweet...

- Is Awal correct?
- How can I cross validate his claim?
- India has highest number of ASNs & IP prefixes in South Asia. Can that impact these results?
- If true and nothing done more of this will show up!

Thoughts after looking at the tweet...

- Is Awal correct? <- Unfortunately he was correct
- How can I cross validate his claim? <- I actually did, more on this soon...
- India has highest number of ASNs & IP prefixes in South Asia. Can that impact these results? <- That can reflect in absolute numbers but not in relative percentage numbers
- If true and nothing done more of this will show up! <- No, and here I am to talk about it! :-)

Validating the claim that India was lacking behind...

How to do RPKI validation of a country?

Find all prefixes originated by that country with origin ASNs and run them against a validator. Simple right?

Challenges with RPKI validation at country level

- 1. How do you map prefixes to a given country? What should be the starting point?
- 2. Running check sequentially against a RPKI validator is slow. When done for thousands of prefixes it's actually very slow.
- 3. How to store the output and track it over time?

Challenges Solutions with RPKI validation at country level

- How do you map prefixes to a given country? What should be the starting point? <- Instead of prefixes, start with ASN from RIR delegation file. And do ASN -> Prefix mapping
- 2. Running check sequentially against a RPKI validator is slow. When done for thousands of prefixes it's actually very slow. <- Used rpki api binary from Louis Poinsignon (Cloudflare) https://github.com/lspgn/rpki-api
- 3. How to store the output and track it over time? <- *Store data in a MySQL database & analyse output using Grafana*

More details on RPKI validator lookup

- RIPE RIS is used for raw data to map ASNs to prefixes.
- Data is formatted in csv & queries in a GraphQL format to RPKI API.
- Can scan entire global routing table in 3-4mins! (IN table takes a few seconds)
- Lookup is triggered using Gitlab CI/CD pipeline. Gives cron like capability but with notification & more.
- Fair amount of code was re-used which I put internally @work to keep an eye on our own routing table as we were deploying RPKI validation across Hurricane Electric's AS6939 backbone.
- Everything is containerized with Docker

If it takes a few seconds on IN, why not scan entire South Asia?

Presenting rpki.anuragbhatia.com !!!

Lookup container Dockerfile

Gitlab CI/CD pipeline

Some more details about Grafana

- Used it as frontend for this data. Essentially supports showing data in any form like graphs, table, time data etc.
- Supports different set of data sources including InfluxDB, MySQL, and lot more.
- Open source and free to use in self hosted format. Besides RPKI tool, also used it on RIPE Atlas data export.
- Supports authentication to give restricted access as well as making data available out in public without any authentication.
