Introduction

Court View Generation (CVG)

01 Introduction: Task Definition

Fact description

Defendant David borrowed 30,000 yuan from plaintiff Mike. (1) The interest was calculated based on the prevailing bank loan interest rate. (2) Defendant David signed as the borrower in the loan agreement issued by the plaintiff. while defendant Tommy signed as the guarantor in the guarantor section of the loan agreement.(3)

Plaintiff claims

Defendant David is liable to repay the plaintiff's principal loan of 30,000 yuan(1) and interest losses.(2) Defendant Tommy bears joint and several liability for the aforementioned debt.(3)

Judge (Human)

Court view

It is established that defendant David borrowed 30,000 yuan from plaintiff Mike, and the court hereby confirms this fact. The plaintiff now seeks the repayment of the principal amount of 30,000 yuan(1) and corresponding interest losses(2) from defendants David, and the court supports this claim. Defendant Tommy voluntarily provided guarantee for the loan and shall assume joint guarantee liability.(3)

BART (AI)

Court view

The court holds that it is established that defendant David borrowed 30,000 yuan from plaintiff Mike, and the court hereby confirms this fact. The plaintiff now seeks the repayment of the principal amount of 30,000 yuan(1) from defendants David, and the court supports this claim. David and Tommy are in a marital relationship and should share responsibility together.

(1)principal claim

Input:

- Plaintiff Claims
- Fact Description

Output:

Court View

- Judge provides accurately responds to the plaintiff claim
- BART lacks the response to the interest claim
- BART provides an incorrect response to the guarantee liability claim

Lack professional knowledge

A real case in CVG

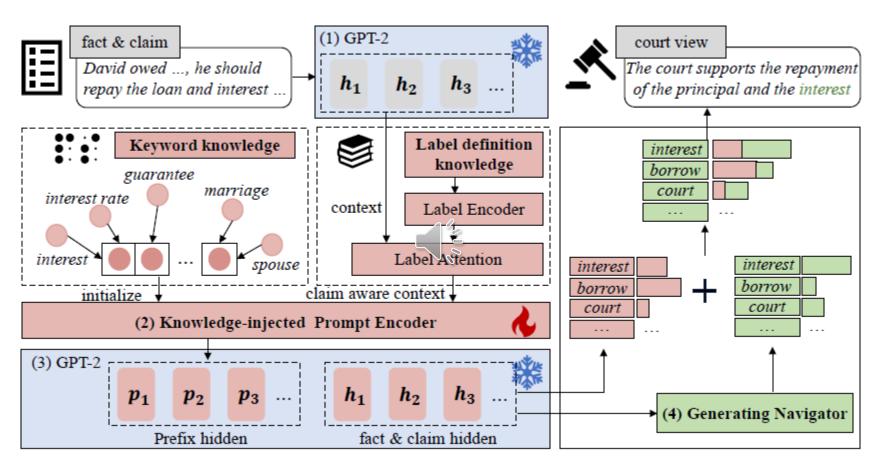

1 Method

Knowledge Injection and Guidance (KIG)

02 Method: Overview of KIG

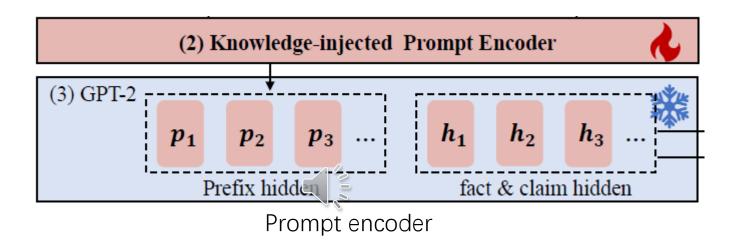

Overview of KIG

Method: Preliminary Prompt Tuning

$$h_i = \begin{cases} MLP_{\theta}(\mathcal{D}_p)[i,:], & \text{if } i < l_p, \\ PLM_{\phi}(x_i, h_{< i}), & \text{otherwise,} \end{cases}$$

$$P(x_{i+1}|h_{\leq i}) = softmax(W_{\phi}h_i^n)$$

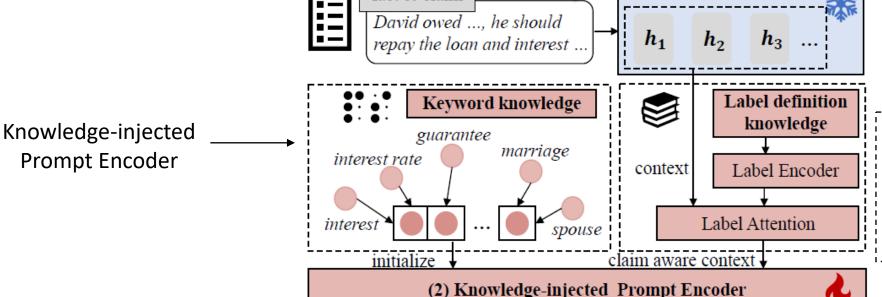

02 Method: Knowledge-injected Prompt Encoder

keywords and label _____ definitions

Claim Labels	Keywords	Descriptions
Principal Claim	{"principal", "debt", "borrower"}	The requests for repayment of the initial borrowed or owed amount, excluding interest and additional charges.
Interest Claim	{"interest", "interest rate", "bank"}	A borrower requests to pay the interest on a owed amount, calculated based on the agreed-upon interest rate in the loan contract.
Spousal Joint Debt Claim	{"spouse", "joint debt", "property division", "marriage"}	One spouse seeks to divide shared debts within a marriage, often occurring during divorce or separation when assets and debts are being split.
Guarantee Liability Claim	{"guarantor", "guarantee", "guaranty contract"}	A guarantor asks to fulfill their duties in a guarantee contract, typically because the borrower failed to meet their contract terms, leading to the guarantor paying the debt or fulfilling guaranteed responsibilities.

(1) GPT-2

fact & claim

$$\hat{\mathbf{e}}_i = \sum_{i}^{K} \phi_i^{cl} \cdot \mathbf{E}(\mathbf{S}_i),$$

Eq1

 $\alpha_i = h_{fc}^T W_c C_i,$

$$C' = \sum \frac{exp(\alpha_i)}{\sum_{j=1} exp(\alpha_j)} C_i$$

Eq2

02 Method: Generating Navigator

$$P(v|a) = \prod_{i=1}^{l_v} P(x_i|x_{1:i-1}, a),$$

$$P(x_i|x_{1:i-1},a) \propto P(x_i|x_{1:i-1})P(a|x_{1:i}),$$

Eq3

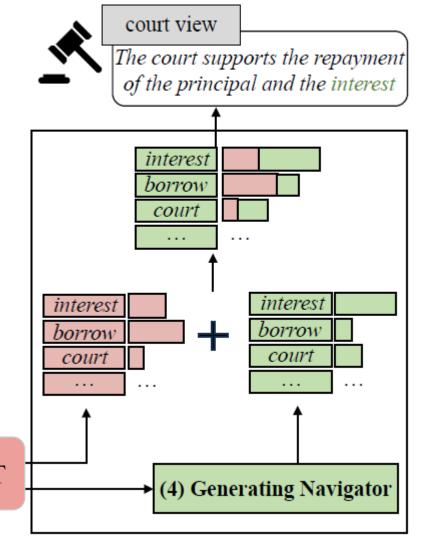

$$\phi_i^s = softmax(\frac{|a_i \cap \hat{a}|}{|a_i \cup \hat{a}|}).$$

$$\tilde{\phi_i^s} = \frac{\phi_i^s}{1 + exp((k-l)/\mu)},$$

Eq4

$$ilde{\phi_i^g} = \phi_i^g + \lambda ilde{\phi_i^s},$$
 Eq5

Promptencoder + GPT

03 Experiment: Dataset

We use the following dataset for experiments:

 civil cases dataset: a Chinese civil lending cases dataset from the paper "De-biased Court's View Generation with Causality"

Evaluation Metrics

- Automatic Evaluation: BLEU, ROUGE, the F1 score Mi-F, Ma-F) and Jaccard similarity coefficient (Mi-J and Ma-J)
- Human Evaluation: Fluency. Fitness.

Туре	Result
# Sample	41693
Avg. # Tokens in Fact Description	177.5
Avg. # Tokens in Plaintiff Claims	76.3
Avg. # Tokens in Court View	205.7
Avg. # numbers of claim labels	2.13

Efficiency Comparison of different methods on GPT-2.

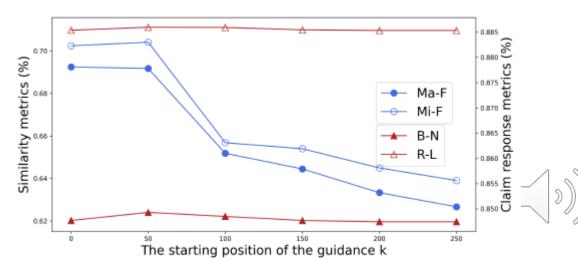

03 Experiment: Other analysis

Fact Description	Defendant David borrowed 30,000 yuan from plaintiff Mike. ⁽¹⁾ The interest was calculated based on the prevailing bank loan interest rate. ⁽²⁾ Defendant David signed as the borrower in the loan agreement issued by the plaintiff, while defendant Tommy signed as the guarantor in the guarantor section of the loan agreement. ⁽³⁾ Subsequently, despite the plaintiffs repeated demands for payment, both defendants failed to make any payments, leading to the initiation of this lawsuit.				
Plaintiff's Claims	Defendant David is liable to repay the plaintiff's principal loan of 30,000 yuan ⁽¹⁾ and interest losses. ⁽²⁾ Defendant Tommy bears joint and several liability for the aforementioned debt. ⁽³⁾				
Court's View (BART)	The court holds that defendant David borrowed 30,000 yuan from plaintiff Mike, and the court hereby confirms this fact. The plaintiff now seeks the repayment of the principal amount of 30,000 yuan ⁽¹⁾ and corresponding interest losses ⁽²⁾ from defendants David, and the court supports this claim. David and Tommy are in a marital relationship and should share responsibility together. ⁽⁴⁾				
Court's View (KIG)	The court has determined that defendant David indeed obtained a loan of 30,000 yuan from plaintiff Mike, and the court affirms this established fact. The plaintiff now requests the return of the principal sum of 30,000 yuan ⁽¹⁾ along with the associated interest losses ⁽²⁾ from defendant David, and the court upholds this demand. Defendant Tommy, of his own accord, offered a guarantee for the loan and shall share joint liability for this guarantee (3)				
Court's View (REAL)	The court holds that it is established that defendant David borrowed 30,000 yuan from plaintiff Mike, and the court hereby confirms this fact. The plaintiff now seeks the repayment of the principal amount of 30,000 yuan ⁽¹⁾ and corresponding interest losses ⁽²⁾ from defendant David, and the court supports this claim. Defendant Tommy voluntarily provided a guarantee for the loan and shall assume joint guarantee liability. ⁽³⁾

04 Conclusion

04 Conclusion

- We investigate the task of court view generation (CVG) by taking the domain knowledge into consideration.
- We propose a Knowledge Injection and Guidance (KIG) method, incorporating a prompt encoder for knowledge injection, along with a navigator for knowledge utilization guidance. The navigator holds transferability on other PLMs.
- We design claim response metrics for the CVG task. Experimental results on a real-world dataset demonstrate the effectiveness of our method
